The city of Leander opens Fire Station 4

The city of Leander has opened a new state-of-the-art Fire Station facility serving the North Eastern portion of the city. This facility was designed by Brown, Reynolds, Watford Architect firm and built by American.

Fire Station 4 at 10964 E. Crystal Falls Parkway was designed for low maintenance with systems put into place to reduce exposure to hazards that are associated with firefighting and firefighting equipment. The station has the ability to house two crews, but is currently operating with one engine and crew. Crews began responding to calls from Fire Station 4 August 22.

Fire Chief Bill Gardner recognized the need for additional Fire Stations as Leander’s growth began to rapidly increase, eventually ranking the city among the fastest growing in the nation. In order to properly serve the community, Gardner created a master plan that included the expansion of staff and facilities to serve the predicted boom in the Leander population.

Fire Station 4 is designed to respond to residents, and businesses located in the rapidly expanding Ronald Reagan corridor. The facility is intended to reflect the architecture of the residential neighborhoods surrounding it.

Fire Station 1, also known as Central Fire Station, was the first dedicated fire station for the city of Leander. Built in 2001, the structure next to Pat Bryson Hall, Leander’s City Council chambers, will be repurposed as new city offices to accommodate staff. A new Fire Station 1 will be re-located at 460 W. San Gabriel Parkway with construction already under way. Plans are already in the works for Fire Station 5, to be located in the Travisso neighborhood.

###
